

To setup gmail to receive other email, follow the steps below:-

- First logon to your gmail account and click on “Settings” at the top right corner
- Once on the “Settings” page, click on “Account and Import” tab
- Click on the “Add POP3 email account”, under the “Check mail using POP3:” section.

- A new window will popup, and enter the email account that you wish to receive email using gmail and click “Next step”. eg. support@photoonesoftware.com (\*\* please disable your popup blocker or allow gmail to popup).

- Now, enter your username, password and POP3 server location.
- Finally tick the “Label incoming message...” for easy indication in inbox.
- Once everything is completed, click on “Add Account”.
- \*\* some servers do not support SSL, in that case you have to just untick the SSL connection feature.
- Done. You have just added a new POP3 email account in Gmail.
- Once everything is done, go back to your “Settings” page and you will see your new email account under “Check mail using POP3:”

You may click on the “Check mail now” link to receive your other email. Happy emailing!
